In this course, you learn to use the Conformal® Equivalence Checker to perform functional verification. You learn the basic flow of equivalence checking and how to run hierarchical comparison of designs. The lab exercises follow major topics and are designed to be directly applicable in design and design verification.

Conformal ECOs at Marvell during pre-mask stage. We have done multiple ECOs using Conformal automated flow on various projects for the past few years. Below is the data for •Example 1 – Block A – Pre-mask ECO was done inside a control block which was instanced multiple(12) times. ECO fix involved combinational logic change in control block.

Cadence Conformal suite of tools contains a tool called Logic Equivalence Checker or LEC. Section 4 of this tutorial describes how to formally verify that the synthesized design is functionally equivalent to the RTL description using LEC. This section can be skipped if one chooses to use Formality for equivalence checking.
