because modern engines are designed to produce more power than required, which is then reduced by the EMS to make the engine operate smoothly over a wider RPM range, with low emissions. This is called de-tuning and produces long-lasting engines and the ability to increase power output later for facelift models.

Engine tuning - Wikipedia

Engines are no different from other vehicle systems in that they too have parts that wear out and need to be replaced according to vehicle manufacturer guidelines that are based on time and mileage. Waiting for parts to fail before performing a routine engine tune up is a recipe for disaster as significant engine damage could occur.
