Solution: Need $Q = 2E_b/N_0 = 10.7$ or $E_b/N_0 = 11$ "3dB or $E_b/N_0 = 13.52$. But $E_b/N_0 = PrT = 13.52$. Thus the data bit must be at least $T = 9.0108$ seconds long, i.e. the data rate $1/T$ must be less than 11 Mbits/second. Clearly we also need a (null-to-null) bandwidth of 22 MHz. then appropriate mathematical tools are subsequently invoked. The beginner is left with the obvious concern. How does one decide which method to use on a new problem? Our proposed solution to this dilemma is to teach mathematics first and then show why a given mathematical methodology can be applied to the modeling problem.

MATHEMATICAL MODELING A Comprehensive Introduction

read bits ofother text books as well. Mathematics is a lot easier ifyou can see why things are done the way they are, rather than just learningthe stuff off by rote. Itis also a lot more fun this way. Most text books assume you already see why, but experience suggests that this is in fact where the problem lies. Which is why I am discursive and

An Introduction to Mathematical Modelling

A mathematical model is a description of a system using mathematical concepts and language.The process of developing a mathematical model is termed mathematical modeling.Mathematical models are used in the natural sciences (such as physics, biology, earth science, chemistry) and engineering disciplines (such as computer science, electrical engineering), as well as in non-physical systems such ...

Read “mathematics books” and do mathematics. Exercises are must. Use as many methods as you can think of, certainly including the one which is recommended. Consult the Appendix after you work out the solution. Follow the comments, interpretations and suggested extensions. Think. Get excited. Discuss. Bore everybody in your known circles.
